Bachelor's Degree, Computer Science
Badji Mokhtar University, Annaba
2022 – 2026

High School Diploma
Math & Technology (Chemistry)
Boutaba Bachir High School, 2022

Building Electricity
BELAID BELKACEM Multi-Skill Training Center,
2026

Algerian Red Crescent
Annaba — 2026

Frontend

HTML, CSS, JavaScript, React.js, Tailwind CSS

Node.js, Express.js, REST APIs

React Native, SwiftUI

n8n, AI Agents, Prompt Engineering,
Context Engineering, LLM Integration

Figma, UI/UX

MongoDB, MySQL, PostgreSQL,
Firebase, Firestore

Python, Java, C

Git, GitHub

Arabic Native

French B1

English B1

German A2

Computer Science graduate focused on software engineering and full-stack web development. Experienced in building web and mobile applications using React, Node.js, Express.js, and database with additional experience developing AI agents and business automation workflows using n8n and LLMs.

AI Recruiter Assistant	2026
-------------------------------	------

Personal Project — AI Automation & Agents (n8n)

- Built an end-to-end AI recruiting pipeline in n8n: resume parsing, LLM-based candidate scoring against job requirements, and automated interview scheduling with live Google Calendar integration.
- Designed a distributed concurrency lock to prevent race-condition double-booking when multiple candidates apply for the same interview slot simultaneously.
- Implemented prompt-injection-resistant AI agents and verified resistance against real adversarial test inputs.
- Integrated Google Calendar, Gmail, Telegram, and Google Sheets into a single workflow with centralized error handling and full audit logging.
- Diagnosed and fixed a critical scheduling bug — caught through live API testing rather than code review — that had silently prevented automatic interview booking in production.

Tech E-commerce Platform	2026 – Present
---------------------------------	----------------

Personal Project

- Building a full-stack e-commerce platform for technology products with product discovery, search, filtering, shopping cart, wishlist, and checkout functionality.
- Developing a responsive React.js frontend with reusable components, form validation, authentication, and user account management.
- Implementing a Node.js and Express.js REST API with database integration, product management, orders, and role-based access control.
- Designing an admin dashboard for managing products, inventory, customers, and orders.

AI Receptionist & Business Automation System

2026 – Present

Personal Project

- Building an AI receptionist system that handles customer conversations, appointment requests, and automated booking workflows.
- Integrating AI agents, n8n, messaging platforms, APIs, databases, and calendar services to automate business operations.
- Designing the system to manage appointment confirmations, cancellations, rescheduling, notifications, and customer context.

CareBuddyDZ — Mobile Application 2025 – 2026

Academic Project

- Developed a mobile application that helps users find and contact nurses, caregivers, and general practitioners.
- Implemented professional discovery based on user needs, availability, skills, and proximity.
- Designed the user interface and application experience using Figma and SwiftUI.
- Integrated Firebase and Firestore for application data and backend services.
- **Technologies:** SwiftUI, Xcode, Firebase, Firestore, Figma.
